SMART PARTS

FLASHLUBE DIESEL CONDITIONER

FlashLube Diesel Conditioner is a premium diesel fuel additive utilizing the world's latest technology available in producing one of the highest-quality diesel fuel additives on the market today. It has undergone extensive testing in the laboratory and in the field to deliver impressive results in engine performance, fuel economy and emission reductions. Specifically formulated to clean, lubricate and protect diesel fuel systems and the

upper cylinder area, FlashLube Diesel Conditioner will save you money with improved fuel economy, and help save the environment by reducing harmful emissions in all diesel engines with a combination of the latest synthetic base oil and additives. It is designed to protect diesel engines, particularly for those running Low Sulfur Diesel (LSD) or Ultra Low Sulfur Diesel (ULSD) fuel, and 1 liter treats 1,000 liters of diesel fuel.

FLASHLUBE VALVE SAVER

FlashLube Valve Saver Fluid is a concentrated Lead Replacement Additive formulated to minimize Valve Seat Recession (VSR) in LPG, CNG and petrol-fuelled vehicles. It is safe to use in vehicles fitted with catalytic converters and oxygen sensors. It cleans and lubricates the upper cylinder and creates a protective barrier between the valve and valve seat, keeping

valves and seats cool. The engines will become easier to start, keep spark plugs and combustion chamber areas clean, cool and lubricated, leading to a longer engine life and a smoother-running engine. FlashLube Valve Saver Fluid should be added directly to the tank just before filling to ensure best mixing, at a rate of 50 ml per 50 liters.

aFe TORQUE BOOSTER INTAKE SYSTEMS

Replacing the restrictive factory air cleaner assembly with a high-performance intake system from the experts at aFe is a simple performance improvement that anyone can do on their diesel truck. For owners

with a Stage 1 aFe intake system wanting more from their system, aFe has developed the Torque Booster system, which improves the Stage 1 systems to levels approaching the Stage 2 systems. Installation typically takes less than 15 minutes. The aFe intake system is available for most popular diesel applications and provides increased horsepower and torque in addition to improved throttle response and acceleration. The systems also reduce heat transfer into the intake charge by shielding and isolating the incoming air from the hot air in the engine bay.

DIABLOSPORT EXTREME POWERPUCK

The engineers at DiabloSport have developed the Extreme PowerPuck for both light- and medium-duty diesel trucks. It is perfect for drivers who use their trucks for towing, work, pleasure, racing, off-roading or even daily driving. Using the Extreme PowerPuck will increase horsepower, torque and overall vehicle performance while also increasing fuel efficiency. The "Diablo Dial" gives users the freedom of changing settings on the fly. It is

available for 5.9- and 6.7-liter Cummins, Jeep Liberty CRD, 6.6-liter Duramax and 6.0- and 6.4-liter Power Stroke diesel engines, in addition to many medium-duty diesel applications.
