## Stay-Put Header Bolts

Heat and vibration have an uncanny way of backing out header bolts. Once the header bolts have disappeared, leaks are inevitable.

- Percy's High Performance Split-Lock header bolts lock internally, expanding the bolt threads against the thread wall.
- To install, simply tighten the bolt, and then tighten the set-pin.
- Available in black oxide or stainless steel.
- Made and packaged in the USA from premium-quality materials.
- Sizes available for most engine applications.

## No-Guess Fiber

In many cases, interior trim panels, dash boards, and other applications can be rendered in fiberglass. One drawback is that fiberglass can be tricky to work with. Mixing resins and

catalysts to the proper ratios is required, and then you must work quickly to get your desired shape before the mixtures sets and hardens. Percy's High Performance now has HyperFiber, a composite construction system that's exceptionally user-friendly.

- HyperFiber has the fiber and resin combined in an uncured state. The resin cures when exposed to UV light.
- Construct and shape your HyperFiber project out of the sun. Unlike convention fiberglass, your working time with HyperFiber is nearly unlimited.
- When the final shape and configuration are reached, bring your HyperFiber project out into the sunlight to begin the curing and setting process. You can also use a Percy's UV light indoors to set and cure.
- HyperFiber is available with or without memory wires that hold your project in shape during construction.
- HyperFiber is non-flammable and contains no hazardous materials. HyperFiber cleans up with soap and water; great for use in automotive, marine, car audio, or any other application that requires a composite be used.

## aFe (Advanced Flow Engineering) Stage 2 Cold Air Intake Kits for 2009 Dodge Ram 1500 V-8 5.7 HEMI

- Designed to maximize air velocity, improve horsepower, torque, throttle response, and fuel efficiency.
- Two filter choices: Pro-5R filter uses five layers of progressive cotton media for excellent filtration. Pro Dry S filter uses progressive synthetic filtration media and requires no oil to recharge.
- Heat shield blocks engine heat and mounts to the factory airbox housing.
- Specially-designed aluminum intake tube is powder coated for a durable, attractive finish.
