AFe – ADVANCED FLOW ENGINEERING

(951) 493-7155
www.afepower.com

BRIEF DESCRIPTION

aFe cold-air intakes are designed to maximize air volume and velocity and produce maximum horsepower and torque. Our C5 intake, for example, made 24 additional hp and 29 lb-ft of torque.

TRADEMARK FEATURES

All of our intakes include a huge air filter and a contoured, rotomolded plastic intake tube. They're available with our Pro 5R air filter for maximum airflow or our new Pro Dry S air filter for maximum convenience. All aFe products have complete engineering tests results including dyno and flow data.

QUOTE FROM COMPANY

"aFe products are designed, tested, and manufactured in the USA by degreed engineers. Our goal is to design the highest-quality intakes and performance products on the market. We back up all of our products with real test results, but the real test is in the smile you will have from having installed an aFe product."
